Nesphostylis bracteata (Baker) D. Potter & J.J. Doyle

Botanical name: Nesphostylis bracteata (Baker) D.Potter & J.J.Doyle (= Sphenostylis bracteata (Baker) Gillett, =Dolichos bracteatus Baker, Dolichos ghaticus Sant, Panthaki.)

Vernacular name: Bhendri, Thapti-Sing

Family : Leguminosae - Fabaceae (Papilionaceae)

**Threatened category**: Vulnerable (Mishra & Singh, 2001)Low risk (Gaikwad & Yadav, 2004).

**Key characters**: Climbers, violet-purple flowers, Stamens diadelphous, pods not constricted, many seeded, seeds 10-12.

**Description**: An extensive, robust perennial climber. Stems glabrous, twining. Leaves 3 foliate, deeply grooved, glabrous, ovate, deltoid, oblique about 15 cm long, apex rounded cuneate at base. Stipules 1.2 cm long, acute oblong. Inflorescence long peduncled raceme. Peduncles deeply grooved, reaching up to 30cm long. Flowers bluish-purple. Bracts minute, linearlanceolate. Pedicels 6-12 mm long, Calyx conspicuously veined, 6-8 mm long. Corolla 2.5 -3cm long. Pods 10-12 seeded linear, flat turgid, 12-15cm long.

Flowering and fruiting: September- October

**Distribution**: India – Endemic to Western Ghats.

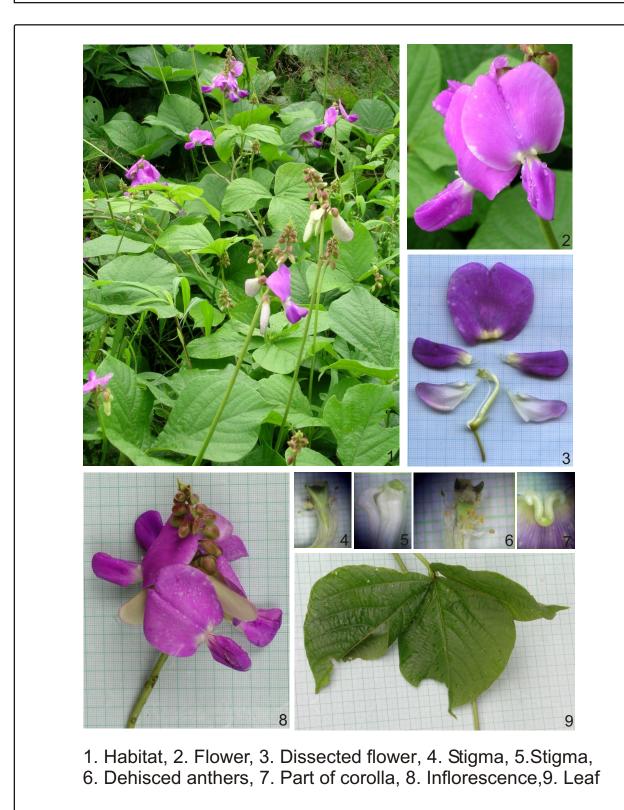

Reported Localities: Pune, Satara, Thane.

**Ecology:** Occasionally observed growing along the banks of stream lets and water falls boardering forested areas of Western Ghats. Prefers altitudes between 600-1200m above sea level. It can be cultivated even in lower altitudes. The climber is protected because of its long edible pods.

Association: No specific plant association is observed.
